## **Underground Enclosure Performance Specifications**

Underground enclosures (boxes and covers) will be UL listed and conform with current ANSI/SCTE 77 “Specification For Underground Enclosure Integrity.” Tier requirements will be specified and all enclosures will meet or exceed the specification. All covers are required to have the Tier level rating embossed on the surface. Test reports must be included with each submittal certified by third party testing companies (notarized and certified) or stamped by a registered Professional Engineer.
